

Infor XA Services & Consulting

When investing in a new ERP system, there's nothing more valuable than knowledge. Custom IT Solutions (CIT) offers Infor XA, IBM i, Electronic Data Interchange (EDI), and business and manufacturing consulting backed by specialized expertise to guide decisions and maximize ROI.

We lead with listening and learning, leveraging collaboration and input from everyone involved on your side. Then, we survey the situation, identify problems, and make sound recommendations.

Fostering unmatched ERP knowledge and consulting expertise that covers:

Infor XA

Whether adopting a new system, migrating to the latest version of Infor XA, or looking for new ways to streamline business, our team provides deep technical guidance to ensure your ERP is working for you, maximizing IT investments and fulfilling functionality goals.

IBM i

With expertise in IBM i's core middleware components and adherence to the IBM i architecture, we ensure seamless integration of various tailored software solutions, catering to every aspect of our customers' IBM i needs.

EDI

With over 30 years of EDI expertise, CIT can guide you through the process of onboarding new trading partners by performing a full gap analysis to determine which user exits would have to be developed as well as completing typical trading partner test case scenarios to get approved and in production in a timely manner.

EAX

Enterprise Access (EAX) is our proprietary, customizable, online self-service portal that runs on IBM i and facilitates convenient access to real-time enterprise data for customers, sales reps, suppliers, and employees, ensuring constant control, communication, and a streamlined user experience.

EC

As developers of the Infor XA Electronic Commerce (EC) module and the new Enterprise Electronic Commerce (EEC) module, which leverages the Infor Development Framework (IDF) and offers the same EDI capabilities, we have a deep understanding of its functionalities and provide comprehensive support.

CIT boasts a five-decade legacy in improving information systems and empowering you to prioritize business and customers. We hone a shared and steady focus on your goals—specifically, how to accomplish them through forward-thinking IT solutions. To do so, we ensure a client-first approach in every aspect of our work.

More from CIT: Infor XA

Real support goes beyond implementation.

From essential management and integration services to custom software development and solutions for streamlined shipping operations, we deliver what's necessary for ultimate operational and bottom-line improvement.

EC to SPS Commerce Integration

EC/EEC customers can directly send and receive EDI documents to and from SPS Commerce, a leading cloud-based EDI provider for retailers. This eliminates the need to install translator software like Trusted Link/Open Text or Extol/Cleo on IBM i. As a result, you can implement EDI with new trading partners more efficiently.

UCC Label Web Service

If trading partners require GS1-128/UCC-128 labels, you can create labels using our web services to communicate shipment information. Once the containerization is complete via our easy-to-use interface, a PDF is generated with the appropriate labels and unique serial number required on the Advanced Shipment Notice. The serial number is then integrated directly onto your Advanced Ship Notice (ASN) transaction satisfying the trading partner's need for labeling on all shipment containers.

COS (COM Offline Shipping)

COS enables efficient container creation, packing, and shipment finalization. Transactions can be submitted via scanner software or other interfaces, updating the IBM i database.

Release Management

Release Management handles planning schedule EDI transactions (830) and shipping schedule EDI transactions (862) from your trading partners, primarily in the automotive industry. It automatically adjusts customer orders to match partners' planning and scheduling information, ensuring timely shipments and synchronized workflows.

We work in Infor XA daily. We know it inside out and constantly evolve our offerings against its technological evolution. Whether seeking new ways to augment your existing ERP system, looking to build software or an online portal from the ground up, or anything in between, CIT stands ready to achieve business-technology alignment.
